

Adding Some styles to App

Now add styling inside src/App.css.

```
.App{
  min-height: 100vh;
  background-image: linear-gradient(15deg, #13547a 0%, #80d0c7 100%);
}
.search-form{
  min-height: 10vh;
  display: flex;
  justify-content: center;
  align-items: center;
}
.search-bar{
  width: 50%;
  border: none;
  padding: 10px;
  border-radius: 5px;
  box-shadow: 5px 10px #979b91;
}
.search-button{
  background: #4da1ab;
  border: 5px solid white;
  border-radius: 8px;
  padding: 10px 20px;
  color: white;
  font-size: larger;
  margin: 0 0 0 10px;
}
.search-button:hover {
  background-color: #fa709a ;
}
.recipes{
  display: flex;
  justify-content: space-around;
  flex-wrap: wrap;
}
```

Create a new file called “recipe.module.css” in the src folder. This file is for adding style to the src/Recipe.js file.

```
@import url('https://fonts.googleapis.com/css2?family=Lobster&display=swap');
.recipe{
  border-radius: 10px;
  box-shadow: 0px 5px 20px rgb(63, 60, 60);
  margin: 20px;
  display: flex;
  flex-direction: column;
  justify-content: space-around;
  background-image: linear-gradient(to right,
    #e4afcb 0%, #b8cbb8 0%, #b8cbb8 0%,
    #e2c58b 30%, #c2ce9c 64%, #7edbd9 100%);
  align-items: center;
  min-width: 40%;
  font-family: 'Lobster', cursive;
}

.image{
  border-radius: 10px;
  margin: 0px 0px 20px 0px;
}
```

At last, you can add React-bootstrap to make the website look nicer.

You can explore more about react-bootstrap in the given link
<https://react-bootstrap.github.io/>

Run Application: Run the application using the following command from the root directory of the project:

npm start

Where to go from here?

- You can add more stylings using Bootstrap
- You can add more innovative icons using Ant Design
- Optimize and make the web app mobile Friendly.
- Use some other free APIs for learning and testing.
- Use knowledge of the react to design the front end of a major project to shine your portfolio.
